# SETTING UP PYTHON AND GIT

1) **Install python 3.11**

```
● ● ●                    📁 yashvibhagat — -zsh — 80×24
[(base) yashvibhagat@Yashvis-MacBook-Pro ~ % python3 --version                  ]
Python 3.11.11
 (base) yashvibhagat@Yashvis-MacBook-Pro ~ % █
```
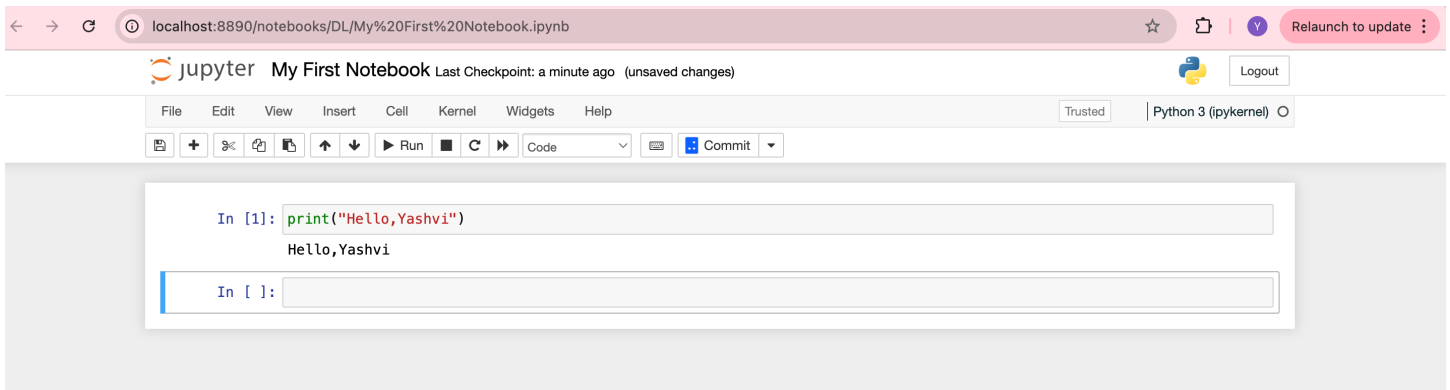

2) Create a folder for your class files, make a python virtual environment called *venv* in this folder, activate it.
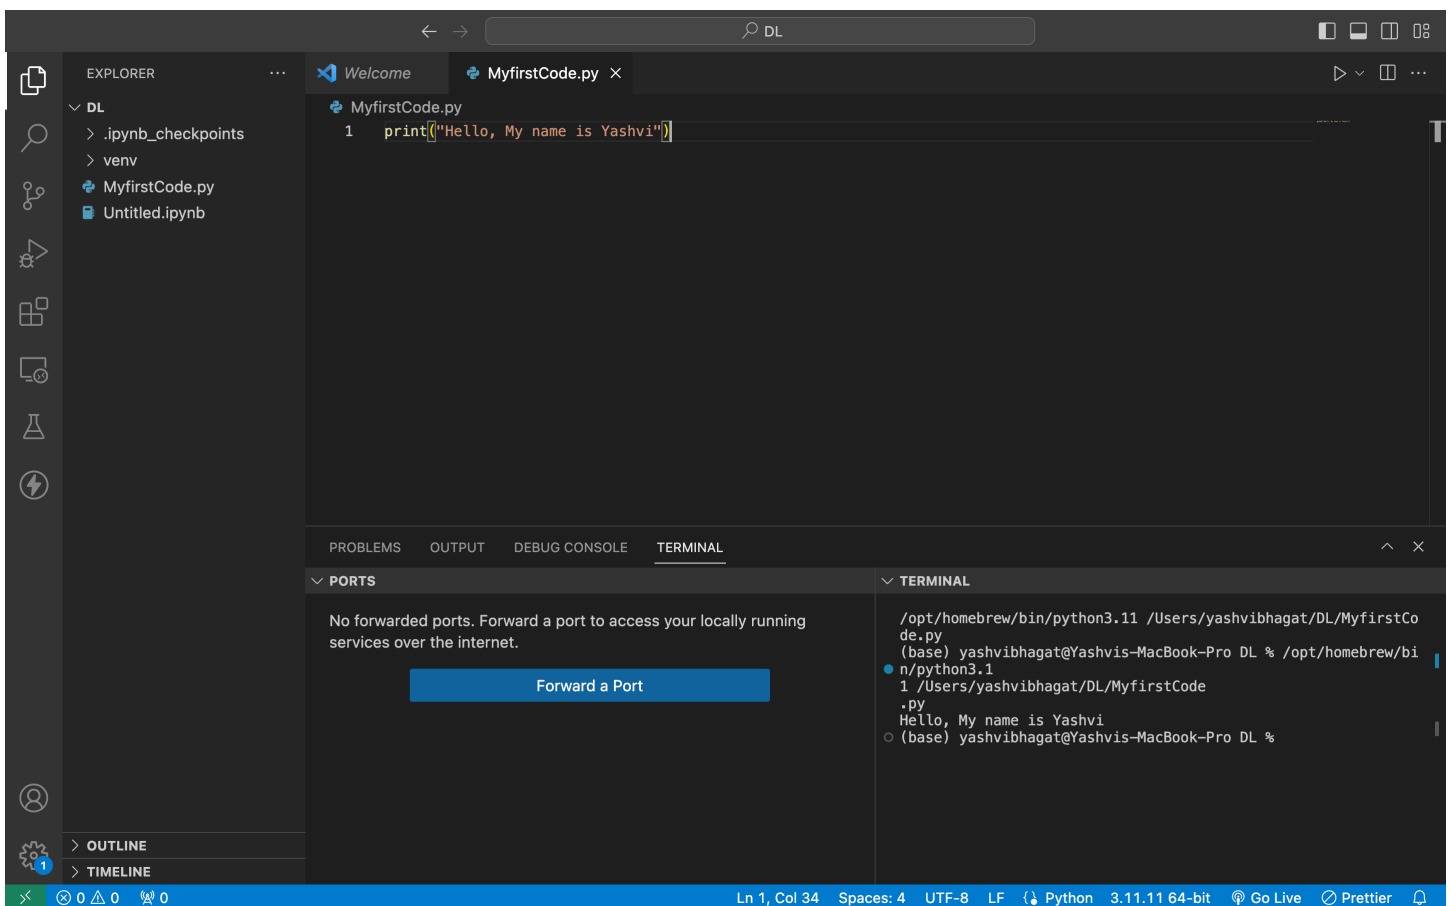

```
● ● ●                      📁 DL — -zsh — 80×24
[(base) yashvibhagat@Yashvis-MacBook-Pro ~ % mkdir DL                           ]
[(base) yashvibhagat@Yashvis-MacBook-Pro ~ % cd DL                              ]
[(base) yashvibhagat@Yashvis-MacBook-Pro DL % python3 -m venv venv              ]
[(base) yashvibhagat@Yashvis-MacBook-Pro DL % source venv/bin/activate          ]
[(venv) (base) yashvibhagat@Yashvis-MacBook-Pro DL % python3 --version          ]
Python 3.11.11
 (venv) (base) yashvibhagat@Yashvis-MacBook-Pro DL % █
```
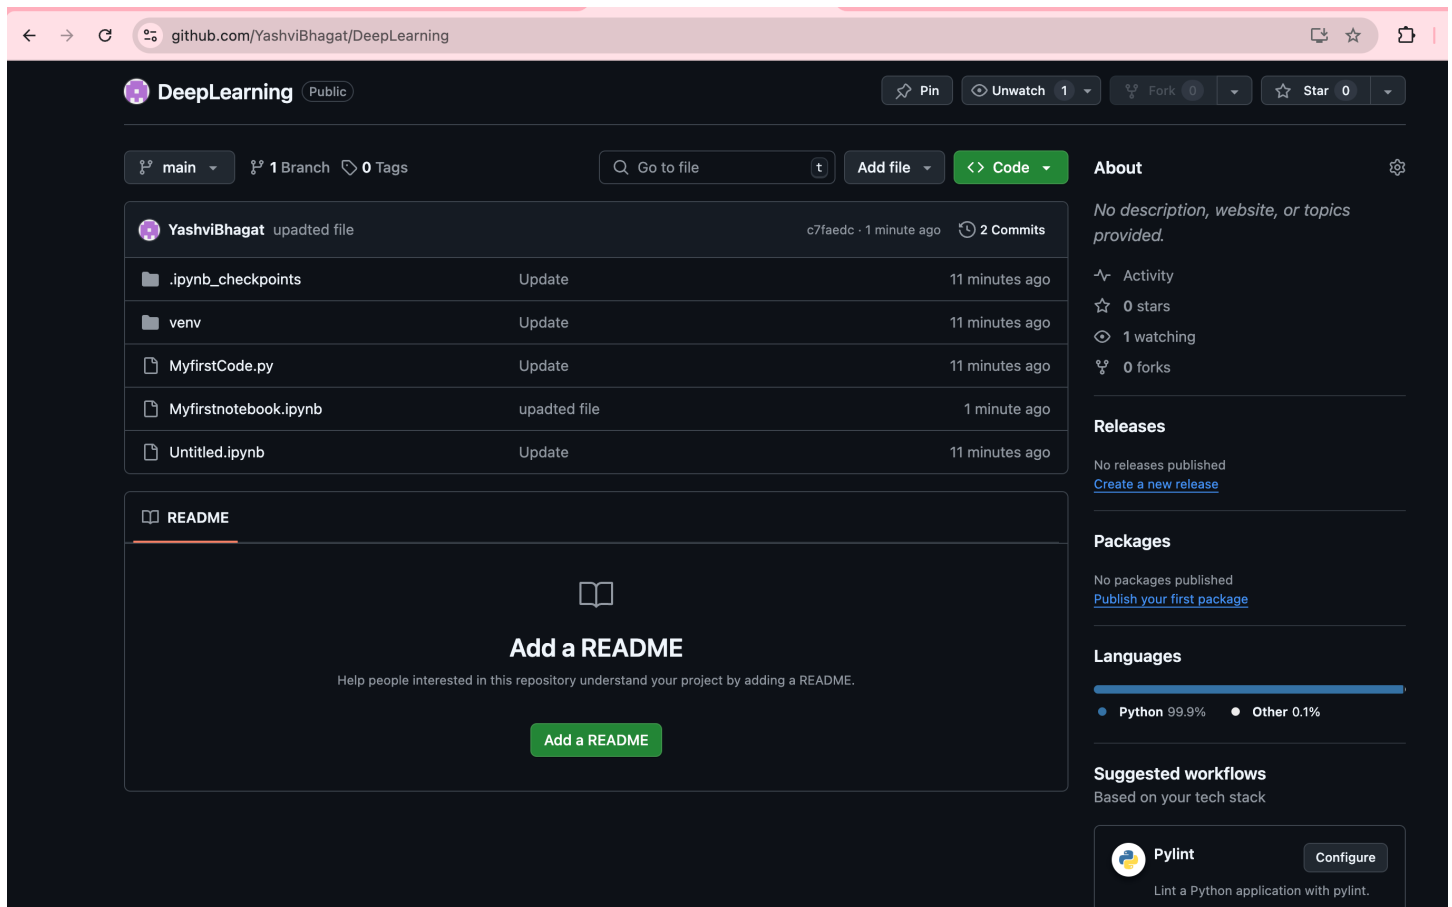

3) **Create a notebook called** *My First Notebook*, **execute a print statement to print your name and attach screen capture**

4) **show a screen capture with the IDE and the output.**

5) Show a screen capture with your GitHub repository.
